Volume 3

*QUALITY. DURABILITY.
INNOVATION.*

We are now getting used to our new facility and the vans are moving off the line. We just shipped our second batch of busses south to a Florida vacation spot to transport their customers and the response has been extraordinary. Thank you goes out to the amazing sales staff at Lehman Bus and Van Sales in Miami.

We cannot say enough good things about our other dedicated dealers and their hard-working employees who keep those vans moving off the line.

TCI employs an incredibly talented group of men and women who build the finest vans and busses in America. We also source all of our materials right here in the U.S.A. When you buy a van or bus from TCI Mobility you can be assured that your van is being built with American products, in an American factory by American workers.

Our employees who perform our skilled labor are more than just ordinary workers. Each individual brings talent and experience that is unrivaled. While most modern factories rotate their staff and try to create rote tasks, we at TCI believe that to build a van with consistent quality you have to make sure each component is built and installed by the most talented at each task.

That is why our welders weld and our HVAC experts install our A/C units. We are a custom builder that makes sure each and every van meets our stringent standards.

We take pride in our workmanship and make sure our vans will outlast and outperform all others. Once you see and drive a TCI van, you'll want to own a TCI van.

NEW PRODUCTS

April 2019

Econability

At TCI Mobility we are always looking for new Ideas and designs for our product line.

Our primary goal is to meet customer demand and be able to provide vans for all segments of the commercial paratransit market. That is why we created our “Econability” line of paratransit vans.

The Econability van is for the customer who is looking for quality on a budget. Our standard Econability van is built on a Ford Transit 150 – 130” Wheelbase Mid Roof van equipped with a 3-passenger bench seat behind the two front seats, and a single wheelchair position behind that seat. Outfitted with a Braun NCL919FIB lift, and Sure Lok manual tie downs, this van will get the job done at a price that you can afford, without sacrificing the quality you expect from TCI Mobility.

School Activity Bus

TCI Mobility has built hundreds of these vehicles for various school districts and local organizations where transporting children safely is paramount to anything else. TCI Mobility provides vehicles that are safe, comfortable and economical.

TCI Mobility is proud to offer a School Activity Vehicle in several configurations. Our School Activity Vehicles typically carry up to 9 children that can enter and exit the vehicle through the front passenger door, and install lowered front step (or running board step) for those little legs, and a TCI Mobility Design manually driver-operated bus door mechanism.

TCI Mobility is the only builder with a proprietary design that allows the OEM door latch to remain in place, thus allowing the door to be opened from the outside handle as well as the interior opener.
